Recruitment Team SRM University  
Kattankulathur 603203

RE: Research Faculty / Junior Lecturer

Dear Sir/Madam

I came to know about a few openings for research faculty positions in your organisation through my placement coordinator. Since I am interested very much in teaching and research I am expressing my interest and would like to know more about the opportunity. With more than three years of academic research experience at IIT Madras as a masters research scholar, I am intellectually obsessed to pursue my research even after my graduation. I also have a strong quest to deepen my knowledge in my area of interest. I believe teaching and research go hand in hand, and research exposure is mandatory for one to be an excellent course instructor.

Even though I clearly understand the position is open for PhD graduates, I would like to apply with my Master qualification for a relevant position to level up my career. I am interested in both temporary faculty positions(part-time or contract based) and full-time positions as a junior lecturer. The opportunity to be a part of the SRM would be a life changing experience for me, setting the trajectory of my real career. My research education has given me profound confidence to work on any problems independently with my skill sets. You can read more about my research activities from my [research profile](#).

I also have more than two years of classroom teaching experience as an engineering mathematics faculty(freelance educator) in a private coaching academy to support my financial needs during my studies. I recently conducted a 40 Hours online course in engineering mathematics through zoom video conferencing. My early interest in mathematics from school days has motivated me to start a teaching career engineering mathematics but however, I'm very much interested in handling any major courses in my discipline. I have also handled *engineering drawing* courses during my teaching assistantship at IITM, myself along with other TA's also conduct tutorials on CAD drawing for the first year students. I have also conducted tutorials on *introduction to python* for the course participants of *computational methods in engineering* taught by my supervisor. I am mentioning the above details to let you know about my strong inclination towards teaching. Some of the challenges I had in my personal life and research hindered my research progress. I would like to take an opportunity to pursue my research and publish more papers in the coming year. I have been to SRM, Kattankulathur campus a few times , world class infrastructure and the ambiance has really motivated me to forward my profile to your organisation seeking an opportunity. To know more about my availability of joining and courses that I am interested to teach, and my research problems I wish to pursue please check this [page](#).

I appreciate your patience for reading this letter patiently, please let me know about any opportunity in case you are interested before the end of this year.

Sincerely,  
Elankovan M G
